

IzoT Interface Interpreter

LAST UPDATE: JUL 2020

The IzoT Interface Interpreter is an application for Microsoft Windows that you can use to process IzoT Markup Language (IML) that you embed within your C or C++ LON application. The IzoT Interface Interpreter converts the embedded IML into standard C declarations for the LON interface to your application. See the [IzoT Markup Language \(IML\) Overview](#) for more information on IML and using the IzoT Interface Interpreter.

For product documentation and more information, see the [SmartServer IoT product page](#) and the [IzoT SDK 2 datasheet](#).
